## Table des matières

I.	How to compile & run the project: .....	3
II.	Project architecture : .....	4
III.	Encountered problems : .....	4

## I. How to compile & run the project:

- Open terminal
- Change the directory to the folder containing the project
- Execute:
  - `javac *.java`
  - Java Server
  - Java Client
  - Java Client2
- To add new candidats and users run : `java CandidatsInput`
- Initial credential for already added users are :
  - Nom : a – mot de passe : a
  - Nom : b – mot de passe : b
  -

## II. Project architecture :

## III. Encountered problems :

- Passing the stub of the client to the server (we should have put the interface name as parameter type but we did put class name at first then corrected it)
- Package managing when creating project in multiple packages

#### IV. Developed features :

- Start vote by typing start on console and closing after a number of days(seconds for testing purposes)
- Changing vote
- adding Candidates and users to vote using the Hard Way
- and other features ...
